Academic Activities Calendar 2021

SEMESTER REGISTRATION AND STUDENT STATUS		
DESCRIPTION	JANUARY SEMESTER	JULY SEMESTER
Semester Registration for Returning Students	Week 0 - 1	Week 0 - 1
Online Semester Registration is CLOSED		
Late Semester Registration	Week 1	Week 1
Appeal to Reactivate Student Status	Week 4	Week 4
Deferment from Study After Week 5 – Pay full Tuition Fees & subjects will recorded as 'W'	Week 1 – 9	Week 1 – 9
SUBJECT REGISTRATION/ ADD/ DROP/WITHDRAWAL		
Add Subject (ONLINE - ECITIE)	Week 0 – 1	Week 0 – 1
Drop Subject (ONLINE- ECITIE)	Week 1 – 4	Week 1 – 4
Verifying Subject Registration (ONLINE - ECITIE)	Week 3 – 4	- Week 3 – 4
Correction of records only on: a) Wrong Subject Code b) Change Subject Group	Week 2 – 4	- Week 2 – 4
After Week 4 – Penalized at minimum RM50 for each request.	Week 5 – 9	Week 5 – 9
After Week 9 - Penalized at minimum RM100 for each request.	Week 10 onwards	Week 10 onwards
Subject Withdrawal (MANUAL - FORM)	Week 5 – 9	Week 5 – 9
Subject Pre-Registration ONLINE – ECITIE	Week 11 – 12	Week 11 – 12
FINAL EXAMINATION		
Draft of Final Examination Timetable released	Week 10	Week 10
Final Examination Timetable released	Week 12	Week 12
BAR List released	Week 17	Week 17
FINAL EXAMINATION

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

- **PEO 1**

UniKL graduates who are knowledgeable, competent and innovative which will contribute towards the requirement of the human capital in chemical and/or process/food/polymer/bioprocess/environment engineering technology related industry.

- **PEO 2**

UniKL graduates who are effective leaders with teamwork skills, as well as verbal and nonverbal interpersonal communication skills;

- **PEO 3**

UniKL graduates who are committed towards the importance of lifelong learning and continuous improvement;

- **PEO 4**

UniKL graduates who are professional, ethical, and socially responsible;

- **PEO 5**

UniKL graduates who are capable of embarking on business and technopreneurial activities

PROGRAMME LEARNING OUTCOMES (PLO)

PLO 1	Apply knowledge of applied mathematics, applied science, engineering fundamentals and an engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices in chemical and process/food/polymer/bioprocess/environment engineering technology.
PLO 2	Problem analysis: Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to their field of activity (DK1 to DK4).
PLO 3	Design/development of solutions: Design solutions for well-defined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations (DK5).
PLO 4	Investigation: Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurements.
PLO 5	Modern Tool Usage: Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations (DK6)
PLO 6	The Engineer and Society: Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems (DK7).
PLO 7	Environment and Sustainability: Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts.

- PLO 8 **Ethics:** Understand and commit to professional ethics and responsibilities and norms of technician practice.
- PLO 9 **Individual and Team Work:** Function effectively as an individual, and as a member in diverse technical teams.
- PLO 10 **Communications:** Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
- PLO 11 **Project Management and Finance:** Demonstrate knowledge and understanding of engineering management principles, business practices, and technopreneurial competencies, as well as identify business opportunities, and apply these to one's own work, as a member and leader in a technical team and to manage projects in multidisciplinary environments.
- PLO 12 **Life Long Learning:** Recognize the need for, and have the ability to engage in independent updating in the context of specialised technical knowledge.

DIPLOMA IN CHEMICAL ENGINEERING TECHNOLOGY

JPT (N/524/4/0072) 04/26 MQA/PA14383

PROGRAMME OVERVIEW

As Industrial Revolution 4.0 such as additive manufacturing, advanced material, big data, and advanced simulation continue to redefine industrial production, Malaysia's chemical industry is increasingly searching for highly skilled manpower with Industry 4.0-ready skill sets to enhance its transformation.

In order support this, UniKL MICET will begin offering a 2.5-year diploma programme in Chemical Engineering Technology (DCET) in July 2021. The curriculum is designed to produce manpower with the requisite skills for economic and national development of the nation. The four major specialisations in the program are Sustainable Process Engineering, Biotechnology & Bioengineering, Advanced Material, and Environmental Engineering Technology & Sustainability.

This program's courses are enhanced by embedding Professional Certifications including Smart 3D Modelling Software (Intergraph) and Ergonomic Trained Person. With credit transfer eligibility of up to 57 credits, graduates from this programme can continue and complete Bachelor of Chemical Engineering Technology at UniKL MICET in 2.5 years. This programme is also in line with the post pandemic socioeconomics drivers, which are focused on energy, smart technology and systems, water and food, environment, and biodiversity.

CAREER PATH

- Chemical Manufacturing Companies
- Petroleum and Petrochemical Industries
- Energy and Transportation Industries
- Oleochemical Industries
- Safety and Health
- Design and Simulation Industries
- Bioplastic Industries
- Rubber and Latex Industries
- Cosmeceutical Industries
- Nutraceuticals Industries
- Biopharmaceutical Companies and Medical Research Institutes
- Environmental Consulting Firms
- Solid Waste and Wastewater Management Sector
- Chemical Production Assistant Engineer
- Plating Technician
- Plant Assistant Engineer
- Plant 3D Software Trainer

- Laboratory Technician
- Chemical Production Assistant
- Chemical Sales & Service Technician
- Primary Production Executive
- Compounding Supervisor
- QA Executive
- Quality and Reliability Technician
- Materials Analysis Technician
- Wastewater Treatment Process Technician

MPU2313 AMALAN ISLAM DI MALAYSIA

Kursus ini membincangkan aspek-aspek amalan Islam yang diaplikasikan di Malaysia. Perbincangan ini meliputi konsep manusia dan agama, asas-asas Islam dan sejarah kedatangan agama Islam di Malaysia serta menerangkan keistimewaan Islam melalui institusi pendidikan, kekeluargaan, ekonomi dan pentadbiran di Malaysia. Di samping itu, perbincangan juga dilengkapkan dengan isu-isu semasa dalam masyarakat berlandaskan ajaran Islam.

Learning Outcomes:

Setelah tamat kursus ini, pelajar akan dapat:

1. Menghuraikan konsep manusia dan agama, asas-asas Islam dan sejarah kedatangan agama Islam di Malaysia.
2. Menguasai ibadat solat dengan betul, menghafal doa-doa selepas solat dan menghafal ayat-ayat al-Quran yang ditetapkan
3. Menerangkan keistimewaan Islam melalui institusi pendidikan, kekeluargaan, ekonomi dan pentadbiran di Malaysia serta isu-isu dalam masyarakat.
4. Menjelaskan isu-isu semasa dalam masyarakat berlandaskan ajaran Islam

MPU2323 RELIGIOUS PRACTICES IN MALAYSIA

This course enables students to understand their roles in developing the nation by exposing them to the influence of religions on the lives of Malaysians, Students should also be able to understand their roles as members of the society according to the constitutions of Malaysia.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the concept of man and religion
2. Describe the practices of religion as stated in Malaysian constitution
3. Explain current issues related to various religions practiced in Malaysia.

References:

1. Saw Swee-Hock (2015). *The Population of Malaysia (Second Edition)*, ISEAS Publishing, Singapore.

3. Gerhard Hoffstaedter (2011), *Modern Muslim Identities: Negotiating Religion and Ethnicity in Malaysia*. NIAS Press.

MPU2213 BAHASA KEBANGSAAN (A)

Mata pelajaran Bahasa Kebangsaan (A) ini disediakan untuk mempertingkatkan kecekapan berbahasa, sesuai dengan intelek pelajar untuk berkomunikasi dengan berkesan secara lisan dan tulisan dalam konteks rasmi, kreatif dan bukan kreatif.

Learning Outcomes:

Setelah tamat kursus ini, pelajar akan dapat:

1. Mengetahui asal usul dan perkembangan Bahasa Melayu
2. Berkomunikasi secara lisan dengan berkesan dari segi sebutan dan intonasi,serta menggunakan struktur tatabahasa yang betul
3. Menghasilkan pelbagai jenis teks dengan bahasa yang betul dan berkesan serta mampu berkomunikasi secara lisan dan bertulis dalam pelbagai situasi.

4. Dewan Bahasa dan Pustaka (2007). *Kamus Dewan*. Edisi Keempat. Kuala Lumpur: Dewan Bahasa dan Pustaka, Kementerian Pendidikan Malaysia

MPU2232 INTERPERSONAL SKILLS

This course is aimed directly at fostering one's aspect of Interpersonal skills namely communication skills; leadership; teamwork; problem-solving and decision-making skills. Students' abilities to participate and interact with others effectively are addressed through individual tests and group projects.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the principles of intrapersonal and interpersonal skills.
2. Communicate effectively using various communication media.
3. Demonstrate leadership and teamwork skills.

References:

1. Wood, J.T. (2016) *Interpersonal Communication: Everyday Encounters*. 8th Edition. Chapel Hill: University of North Carolina.

MPU 2133 BAHASA MELAYU KOMUNIKASI 1

Kursus ini melatih pelajar antarabangsa untuk berkomunikasi dalam bahasa Melayu asas yang meliputi situasi kehidupan harian. Pelajar akan diperkenalkan dengan pertuturan dan penulisan bahasa Melayu mudah. Pengajaran dan pembelajaran akan dilaksanakan dalam bentuk kuliah, tutorial, tugas dan pengalaman pembelajaran pelajar di dalam dan di luar kelas. Pada akhir kursus ini, pelajar diharapkan dapat berkomunikasi dan menggunakan ayat mudah dengan berkesan.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Menerangkan kandungan teks penuh yang menggunakan ayat mudah dan ayat berlapis..
2. Bertutur dalam pelbagai situasi dengan menggunakan ayat mudah dan ayat berlapis;
3. Menyusun idea secara kreatif dan sistematik dalam penulisan karangan pendek.

4. Siti Hajar Abdul Aziz. 2008. Siri Pendidikan Guru Bahasa Melayu I. Shah Alam: Oxford Fajar Sdn. Bhd.

MPU 2163 PENGAJIAN MALAYSIA 2

Kursus ini membincangkan Sejarah dan Politik, Perlembagaan Malaysia, Sistem dan Struktur Pentadbiran Negara dan Agama Kepercayaan. Kursus ini adalah bertujuan untuk melahirkan graduan yang mempunyai identiti kebangsaan dan semangat patriotisme yang unggul. Pengajaran dan pembelajaran akan dilaksanakan dalam bentuk kuliah, tugas, peperiksaan dan pengalaman pembelajaran.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Menghurai dan membahaskan kepelbagaian dalam masyarakat.
2. Mengulas kepentingan identiti kebangsaan ke arah mengukuhkan semangat patriotisme.
3. Membina dan memupuk hubungan dan interaksi sosial dalam kalangan pelajar.

MPU2412 CAREER GUIDANCE 1

This course is one of the co-curriculum modules offered to develop well-rounded individuals through involvement in social and community activities. Specifically, it enables student to understand the important of career planning. It also promotes soft skills that can be applied in their future careers. Apart from that, it creates a better understanding about potential employers' expectations in job hunt.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply appropriate interpersonal skills in building up their own towering personalities
2. Differentiate their self-concept and self-image which reflect their personalities
3. Demonstrate ability to plan their future career and targets.

References:

1. Devito, J. A. (2013). The interpersonal communication book (13thed.). U.S.A. Pearson

3. James A. Athanasou & Raoul Van Esbroeck (2008). International handbook of career guidance. Springer.

MPU2422 COMMUNITY SERVICE 1

This course is one of the co-curriculum modules offered to develop well-rounded individuals through involvement in social and community activities. Specifically, it aims to develop interest among the students to participate in community programs. It also enables student to understand the important of performing of community services and the ways to implement the programmes and activities. Besides that, it provides better understanding to the student on the values, ethics and benefits of carrying out community service programmes.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Organize ad participate in the community service programmes and activities.
2. Apply knowledge learnt in course in community service programmes and activities
3. Demonstrate basic entrepreneurship skills in community service programmes and activities
4. Explain the values, ethics and benefits of participating in community service programmes and activities.

MPU2432 CULTURE 1

This course is one of the co-curriculum modules offered to develop well-rounded individuals through involvement in social and community activities. Specifically, it aims to develop students' personalities and social interaction skills, as well as foster closer relationship among the student in the university through the organization of and participation in cultural activities.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply knowledge gained in planning and organizing a cultural event.
2. Apply appropriate skills in participating in a cultural event.
3. Explain the benefits of participating in a cultural activity.

References:

1. Hatta. 2013. Teater Filem dan Pengurusan Seni. Kuala Lumpur; Dewan Bahasa dan Pustaka.

3. Norliza Rofli & Eddin Khoo. 2009. Malaysian Culture: An Introduction. Kuala Lumpur: Jabatan Kebudayaan dan Kesenian Negara.

MPU2442 RAKAN MASJID 1

This course is one of the co-curriculum modules offered to develop well-rounded individuals through involvement in social and community activities. Specifically, it aims to develop students' who understand their roles as Muslims and are responsible to develop the ummah. This course also aims to expose students to the function of mosque as the main institution in developing the Muslim society.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the beauty of Islam in every aspect in their life.
2. Demonstrate several activities in relation to the Muslim practice.
3. Discuss the significance of the organized activities in the course.

References:

3. Mohd Ismail Mustari & Kamarul Hasmi Mustari (2008). Pengurusan berkualiti memacu kecemerlangan pengurusan masjid. Universiti Teknologi Malaysia Press: Skudai.

MPU2452 SISWA-SISWI BOMBADAN PENYELAMAT 1

This course is one of the co-curriculum modules offered to develop well-rounded individuals through involvement in social and community activities. Specifically, it gives exposure on the introduction to Malaysian Fire Rescue Department, foot marching techniques, fire rescue, ascending and descending technique and basic emergency aid.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Participate actively in Project (theory and practically about BOMBA activities).
2. Communicate and demonstrate leadership and team skills through BOMBA activities (rescue, fire rescue and first aid).
3. Apply appropriate fundamental of rescue, fire rescue and first aid.

3. Akademi Bomba & Penyelamat Malaysia. 2012. *Kawad Operasi Kebombaan*. Jabatan Bomba dan Penyelamat Malaysia: Kuala Lumpur.

MPU2462 SISWA-SISWI PERTAHANAN AWAM 1

Kursus ini memfokuskan perbincangan tentang peranan dan fungsi Angkatan Pertahanan Awam dan mengaplikasikan ilmu pengetahuan dalam pertolongan cemas, dan kawad kaki. Melalui aktiviti seperti ini, pelajar dapat membuat perancangan, pelaksanaan tugas, pertolongan kecemasan dan aktiviti kebakaran.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Memberi peluang kepada pelajar mendapat pengetahuan dan kemahiran untuk membantu diri sendiri dan orang lain
2. Memupuk nilai/sikap hormat-menghormati, menurut perintah, berdisiplin, bekerjasama, bertanggungjawab, berhemah, kejujuran, keyakinan diri dan kepimpinan
3. Menanam semangat kesedaran sivik, ketaatan dan cintakan negara serta penjagaan alam sekitar
4. Mempertingkatkan ketahanan fizikal, mental dan daya kerohanian yang seimbang.

MPU2472 SPORTS MANAGEMENT 1

This course is one of the co-curriculum modules offered to develop well-rounded individuals through involvement in social and community activities. Specifically, it aims to provide students with adequate information and understanding on the implementation and rules in sports management. This course also explores various aspects of sports management namely scope, basic principles, technique and current issues pertaining to sport management.

Learning Outcomes:

Upon completion of this course students should be able to

1. Prepare document in order to organize competition.
2. Apply knowledge gained by managing competition.
3. Participate and evaluate the benefits of participating in lecture or practical class related to sport, recreation and leisure.

References:

2. Milena Parent & Sharon Smith-Swan (2012). *Managing Major Sport Events Theory & Practise*. Routledge Taylor & Francis Group.

MPU2482 PERSONAL FINANCIAL MANAGEMENT 1

This course is to educate students on personal financial education. It is to open their minds to things that they should be prepared for financially when they enter the competitive job market. The course explains what they should start doing early in their life to achieve their financial dreams.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the concept of financial planning, building financial wealth and avoiding financial troubles.
2. Plan and execute financial planning events at campus level.
3. Describe the program implementation.

References:

1. AKPK (2011). *Power!* Kuala Lumpur : Agensi Kaunseling dan Pengurusan Kredit
2. AKPK (2010). *Money Sense: Getting Smart with Your Money*. Kuala Lumpur: Agensi Kaunseling dan Pengurusan Kredit.

MPU24102 INTEGRITI & ANTI RASUAH

Kursus ini merangkumi konsep asas tentang nilai Integriti, bentuk pelanggaran rasuah, salah guna kuasa dalam kehidupan seharian dan organisasi serta kaedah pencegahan rasuah. Risiko dan kes rasuah sebenar dibincangkan dalam sesi pembelajaran.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Menghuraikan nilai Integriti dalam kehidupan seharian.
2. Menilai bentuk pelanggaran rasuah dan salah guna kuasa dalam kehidupan dan organisasi.

3. Mempamerkan nilai Integriti dan pencegahan rasuah melalui aktiviti masyarakat.

WED 10402 COMPETENCY ENGLISH

This course focuses on both receptive (reading) and productive (speaking & writing) skills as well as grammar skills. It serves to enhance and strengthen students' proficiency in English. Assessments will be task-based where stimulating exercises and group activities will be employed to motivate students to use the language confidently in various situations..

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply correct grammatical components in written form.
2. Express themselves effectively using appropriate language skills through discussion and presentation.
3. Analyze linear and non-linear comprehension texts using appropriate reading skills.
4. Produce written work using correct writing techniques.

3. .Yat, C.W. (2015). *Ace Ahead MUET*. Kuala Lumpur: Oxford University Press.

WED 20202 COMMUNICATION ENGLISH 1

This module is to enhance students' acquisition of English through language enrichment activities. The module enables students to enhance their English language proficiency through written work and oral communication. Students also engage in exploring and responding to ideas through group discussion and conducting a project. Students are then exposed to the fundamentals of presentation skills..

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply correct grammatical skills in written form.
2. Produce professional business correspondence documents
3. Organise an event through conducting a group discussion, writing a proposal, presenting and executing the event.

References:

3. Guffey, M. E. & Loewy, D. (2013). *Essentials of business communication*. Mason, Ohio: South-Western Cengage Learning.

WED 20302 COMMUNICATION ENGLISH 2

Students are exposed to fundamental writing skills that focus on academic writing. They are also exposed to language structures. In the second part of the course, students are guided to undertake academic writing assignment with consultation and previous writing assignment. In the last part of the course, students need to present based on the academic writing assignment using the learnt presentation skills.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Use appropriate mechanics in writing effectively.
2. Produce essay using mechanics of writing techniques.
3. Prepare academic report by incorporating relevant academic resources.
4. Present Information using effective presentation techniques

WMD10101 MANDARIN 1

This course introduces the basic grammatical structures of Chinese sentences to acquire the basic oral and written communication skills. The contents of this course are Chinese writing system (including Pinyin), numbers, useful Chinese expressions to greet others, to introduce oneself and family members, date, time, food and beverages.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Use words & phrases in Pinyin system and/or Chinese characters.
2. Practice basic Chinese language for daily communication within the limits of vocabularies and sentence structures acquired in the course,.
3. Perform learned Chinese vocabularies, phrases or short sentences in limited contexts.

WMD10201 MANDARIN 2

This course introduces the basic grammatical structures of Chinese sentences in order to acquire the basic oral and written communication skills. The contents of this course are useful expressions in Mandarin to activities in university, hobby and interest, shopping and purchases, locations, direction, seeing a doctor and holiday activities.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Use Chinese words, phrases, short sentences about learned topics.
2. Practice Chinese language for daily communication within the limits of vocabularies and sentence structures acquired in the course.
3. Perform learned Chinese vocabularies, phrases or short sentences in various contexts.

WAD10101 ARABIC 1

Rationale for inclusion of the course in the program:

This course is intended to expose the student with conversation skill of beginner-level Arabic language. Students will be familiarized with elemental Arabic grammar and be able to construct a Arabic report and essay. This course seeks to develop passion of students to the course, alphabetical, vocabulary, industrial terms, nouns, verbs, basic grammar and explain the benefit of learning Arabic to the students. Student are also expected to be able to write an Arabic sentences.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain basic Arabic grammar within the scope of the course.
2. write basic Arabic sentences and questions based on what they have learnt in the course.
3. Communicate orally in Arabic at a beginner's level.

3. Othman bin Arifeen, Dr. Mohd Phuzy Usop (2014). *learn Arabic by yourself (Book 6)*, Al-Hidayah Publication, Batu Caves Selangor

WAD10201 ARABIC 2

Rationale for inclusion of the course in the program:

This course is intended to familiarize students with conversational skills in Arabic at a beginner level. It exposes students with basic Arabic grammar in order to enhance their ability to construct a report and essay in the language. This course seeks to develop passionate and self-motivated students of Arabic by enhancing their basic grammatical knowledge in the language as well as their knowledge of daily and industry focused terms and phrases in an Arabic-speaking setting.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Produce written work using Arabic knowledge and skills learnt in the course.
2. Communicate in basic Arabic language in written and verbal form.
3. Prepare project using content and skills learnt in the course.

References:

1. Amazing Bahasa Arab, Nur Aina Sabariah Md Isa, Akram Hijri Abdullah Akhill, Mohd Aminuddin Ab Rahaman. Oxford Fajar (2017)
2. Mustafa Umar, Perbualan Bahasa Arab, (2012), Darul Nu'man, Kuala Lumpur
3. Othman bin Arifeen, Dr. Mohd Phuzy Usop (2014). learn Arabic by yourself (Book 6), Al-Hidayah Publication, Batu Caves Selangor

WBD10102 INTRODUCTION TO ENTREPRENEURSHIP

This course aims to prepare students with the main characteristics of an entrepreneur and provide basic knowledge and skills in establishing a small venture.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe entrepreneurship value and culture
2. Demonstrate the ability to assess business environment
3. Identify entrepreneurship opportunity and explain the process in starting up a business
4. Develop a business idea and participate in entrepreneurship activities

References:

1. Azahari Jamaludin, Abd Razak Mohd Yusoff, Mohd Hazli Mohd Rusli, Salwah Che Mat & Zawiah Abdul Majid (2011). Introduction to entrepreneurship. Oxford Fajar

WID41009 INDUSTRIAL TRAINING

This course exposes students to real industrial environment and gives them the opportunity to practice the knowledge and skills they have acquired during their academic years.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Demonstrate the right work manner and attitude with deliberation on safety and health in a working environment.
2. Perform tasks with minimum supervision and meet the company's expectations.
3. Apply technical knowledge, analytical and problem-solving skills to accomplish task assigned by the company.
4. Report effectively on work experience during attachment, including knowledge and skills acquired, in oral and written form.

CPD12403 FLUID MECHANICS
CPD12504 MATERIAL AND ENERGY BALANCE

WQD10103 TECHNICAL MATHEMATICS 1

The course covers general mathematical components involving algebra, trigonometry and complex number. It emphasizes on developing students' competence to prepare them for higher level Mathematics. The main method of delivery combine lecture, tutorial and drilling activities to generate students' interest.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve operations and problems related to algebra.
2. Apply trigonometric functions in solving triangular problems.
3. Solve complex number operations in several forms.

References:

1. Sophie, G. (2015) Pure Mathematics 2 and 3 (6th Ed) Hodder Education, UK.
2. Tony, B. (2017) Complete Additional Mathematics for Cambridge IGCSE & O Level (1st Edition). Oxford University Press, UK".

WQD10203 TECHNICAL MATHEMATICS 2

This course provides fundamental concepts of calculus where students will be exposed to the theories and applications of trigonometry, functions, limits, differentiation and integration. These are essential mathematical components which students will encounter in science and engineering technology courses during their academic programme.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the theories and concepts of trigonometry in problem solving.
2. Solve operations and problems related to functions.
3. Solve practical problems using differentiation and integration techniques.

4. Peterson, J. 2012. Technical Mathematics (4th Edn). Delmar Cengage Learning: New York.

CLD22002 ENGINEERING STATISTICS

This course is a beginner level course in elementary applied statistics. This course covers introduction to statistics, descriptive data analysis, introduction to probability, probability distribution, sampling distribution, estimation, hypothesis testing and simple linear regression and correlation. Students will be able to apply statistical concepts to real situations.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain a descriptive and inferential statistics for interpreting results.
2. Apply appropriate statistical methods to calculate the probability and solve statistical problems.
3. Interpret the outcome from statistical software output with the statistical concept.

CLD12003 GENERAL CHEMISTRY

A one-semester course designed to prepare engineering technology students with basic knowledge and hands-on skill in Chemistry. It will emphasize on the importance of knowledge in units of measurement, structure of atom and matter, quantitative relationship, the mole, chemical reaction, solution chemistry, introduction to acid base, electrochemistry and gaseous state of matter. It will create basic practical hands-on related laboratory skills.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply appropriate knowledge on solving problems related to basic principles of chemistry.
2. Follow the correct way of handling chemicals and apparatus with during conducting experiments.
3. Assist affectively as a team member in preparing group assignments related to basic principles of chemistry.

References:

CLD10803 ORGANIC ANALYTICAL CHEMISTRY

This course provides students with an introduction into organic chemistry and the role of analytical techniques and tools used in identifying organic compounds. The topic include the theory and general applications of spectroscopy and chromatography techniques.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the phenomena, basic concepts, laws and principles in organic and analytical chemistry.
2. Perform laboratory works related to reaction of organic compound.
3. Assist affectively as team member in preparing group assignments related to basic principles of organic and analytical chemistry.

CLD12102 ELECTRICAL TECHNOLOGY

This course provides fundamental knowledge in electrical technology such as basic concept of electricity, circuit theorem, AC and DC circuit analysis, magnetism, principle of single and three phase system, electrical machinery and their applications.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe basic principles and practices from electrical fundamental disciplines to solve electrical problems.
2. Perform experiments and project according to the standard operating procedure given.
3. Apply basic principles of electricity, circuit theorems, electrical system, magnetism and electrical machinery.

References

1. Edward Hughes (2012) "Electrical Technology", 11th. Edition, Prentice Hall

3. Charles K. Alexander and Matthew N.O. Sadiku (2007), "Fundamental of Electric Circuit", 3rd Edition, McGraw-Hill

CPD12303 THERMODYNAMICS

This is an introductory course to the study of the laws that govern the conversion of energy from one form to another, the direction in which heat will flow and the availability of energy to do work. In this course, student will be introduced to the First and Second Law of Thermodynamics and its applications in the other engineering courses. In this course, students will be studying the terminology, principles, theory, and practical application of the First and Second Law of Engineering Thermodynamics..

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the basic concept and principle of thermodynamics to the various processes and systems.
2. Solve problems related to the application of thermodynamics.
3. Perform laboratory experiments safely based on procedures.

References:

1. Cengel, Yunus A., Boles, Michael A. (2006) *Thermodynamics: An Engineering Approach*, 5th edition, McGraw-Hill.

3. Wark, K. and Richards, D.E. (1999). *Thermodynamics*. (6th Edition). McGraw-Hill

CPD12403 FLUID MECHANICS

This course introduces principles of fluid mechanics and introductions to several topics, with emphasis on the incompressible case (liquids and/or gases at low speed). Topics to be covered include the introduction to fluid systems, fluid characteristics and behaviour, pressure and static fluid, internal flow (flow in pipe and conduits) and equipment in fluid flow.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Discuss the concepts of static and dynamic fluid and its application in fluid system.
2. Assess the basic theory of fluid in solving problems related fluid static and dynamic
3. Perform laboratory experiments safely based on procedures..

References:

1. Cengel, Y.A. and Cimabala, J.A. (2006). *Fluid Mechanics*. Boston: Mc Graw Hill

3. Noel de Nevers (2004). *Fluid Mechanics for Chemical Engineers* (3rd Ed.). McGraw Hill

CPD12504 MATERIAL AND ENERGY BALANCE

This course is to introduce students to the principles and calculations used in basic chemical process systems, to acquaint students with material and energy balances and the techniques to formulate and solve problems. This course covers the basic calculations used in chemical processes. It includes units and dimensions, process variables, material balance, energy balance, single phase and multiphase systems.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve pertinent data on process variables to account for the flows to and from the process and its units.
2. Apply the concept of phase system, material balances and energy balances in chemical process plants.
3. Perform laboratory experiments safely based on procedures.

References:

1. Felder & Rousseau (2015), Elementary Principles of Chemical Processes, 4th Edition, John Wiley & Sons.
2. Himmeblau, D.M. (2012), Basic Principle and Calculation in Chemical Engineering, 8th Edition, Prentice-Hall."

DISCIPLINE CORE

CPD22002 HEAT TRANSFER

**CLD22103 PROCESS INSTRUMENTATION &
CONTROL**

CPD22203 MASS TRANSFER

CPD22303 INDUSTRIAL SAFETY & HEALTH

CPD22604 REACTION ENGINEERING

CPD39806 FINAL YEAR PROJECT

CLD22103 ENGINEERING DRAWING

This course will emphasize on introduction to engineering drawing and Piping and Instrumentation Diagram (P&ID). The contents cover the knowledge of technical drawing standard and practicing the modern tools using Computer Aided Drafting and Design (CAD) including 2D and 3D design.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Practice engineering drawing standard and P&ID.
2. Construct 2D design and 3D design parts using CAD software.
3. Assemble 3D parts including chemical process equipment and piping design.

1. Scott Onstott (2017) "AutoCAD 2018 and AutoCAD LT 2018 Essentials", John Wiley & Sons Inc.
2. Randy Shih (2018) "Learning Autodesk Inventor 2018", SDC Publication.

CPD22002 HEAT TRANSFER

This course is intended to serve as an elementary treatment of the principles of heat transfer. The primary objective of the course is to present the fundamental principles of heat transfer by relating those principles to practical, real-world applications. By showing how basic heat-transfer concepts relates to real thermal systems. Students are introduced to some of the most widely encountered applications in which heat transfer processes are vital. Second, by offering a balanced blend of basic theory and applications, this course helps bridge the gap between heat transfer theory and heat transfer practice. In addition it covers introduction to heat transfer, conduction heat transfer, convection heat transfer, radiation heat transfer and the application of heat transfer especially in heat exchanger.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain three modes of heat transfer which are conduction, convection and radiation. (C2, PLO1)
2. Apply basic calculation in solving problems related to heat transfer. (C3, PLO2)
3. Perform laboratory experiments safely based on procedures. (P3, PLO4)

1. Geankoplis, C.J., (2018) Transport Processes and Separation Processes Principle, (Includes Unit Operations) (5th Edition).
2. Cengel, Y.A., (2007), Heat and Mass Transfer: A Practical Approach, 3rd Edition, McGraw Hill.

CPD22103 PROCESS INSTRUMENTATION & CONTROL

This is an Introductory Course in fundamental concept in both Process Control and Process Instrumentation as well as their application in Industry. This Course focuses on the Measurement of Pressure, Level, Temperature and Flow and also Principle of Maintenance, Troubleshooting and Safety for Process Instrumentation. In Process Control, the concepts to be covered are fundamental of Process Control, Controller Tuning and Control Strategies for Chemical Process. Last but not least, the students will also be exposed towards various Process Instrumentation And Control equipment via Laboratory Experimentations.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Employ the knowledge of instrumentation and control in chemical process flow diagram.
2. Apply the principles of instruments with different control strategies for various chemical process applications.
3. Conduct laboratory experiment safely based on procedures.

References:

1. Seborg, D.E., Edgar, T.F. and Mellichamp, D.A. (2019) Process Dynamics And Control, 4th Edition, John Wiley & Sons.

4. Thomas, A.H., (2015), Measurement And Control Basics, 5th Edition, ISA Control Series.

CPD22203 MASS TRANSFER

This course introduces different types of unit operations involved in the chemical and other physical processing industries such as distillation, absorption, liquid-liquid extraction and solid-liquid extraction (leaching). It also deals with design of separation operations using mass transfer principles.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the principles of mass transfer in different types of unit operation in chemical industries.
2. Solve the principles of mass transfer problems in different types of unit operation in chemical industries.
3. Perform laboratory experiments safely based on procedures.

CPD22303 INDUSTRIAL SAFETY & HEALTH

To impart the knowledge and create awareness of occupational safety and health. Student will expose to the techniques, legal, society and cultural issues in making the workplace as safe as possible.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Illustrate the ability to recognize the types of hazards, the appropriate control measures and risks associated with safety and health at workplace.
2. Develop the ability to collaborate with team members in carrying out activities related to occupational safety and health, with referred to relevant safety and health laws.
3. Demonstrate business practices as well as technopreneurial competencies to all work activities related to occupational safety and health.

CPD22604 REACTION ENGINEERING

This course will impart knowledge in basic principles and fundamental in chemical reaction kinetics, types of reactor and its design characteristic and catalyst and catalytic reaction. Students will be exposed to a number of chemical reaction calculations involving different types of reactors.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve problems related to chemical reactions.
2. Analyze chemical kinetics in designing reactors.
3. Perform laboratory experiments safely based on procedures.

References:

1. Fogler H.S., (2020), Elements of Chemical Reaction Engineering, 5th Edition, Prentice Hall International Series.

CPD39806 FINAL YEAR PROJECT

This course introduces students with ability and skills in conducting a technical project based on their specialization area. It provides students with technical writing and presentation skills.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Plan the project activities to fulfil the proposed research problem.
2. Manage and execute the project plan to accomplish project objectives.
3. Analyse project results using appropriate technique or tools.
4. Produce a project report in accordance with the specified standard format.
5. Present and defend the project outcomes effectively.

ELECTIVES

Sustainable Process Engineering

Elective 1: CPD22403 Plant Utility & Safety

Elective 2: CPD22503 Petrochemical & Petroleum Refining Technology

Elective 3: CPD22703 Plant Maintenance & Inspection

Elective 4: CPD22803 Oil & Fat Process Technology

CPD22403 PLANT UTILITY AND SAFETY

This course introduces students to basic chemical and non-chemical plant utility system such as prime movers, electrical system, water system, cooling system, boiler feed water treatment, boiler operation, electrical steam generation, compressor, and their safety aspects. Knowledge on plant utility and safety will be enhanced further during industrial visit.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe the function of various equipment utility and basic troubleshooting of plant.
2. Apply fundamental operation of plant equipment and basic safety practice for various plant utilities.
3. Display understanding of the plant utilities and safety fundamental based on industrial visit. (P3,

5. Boiler Operators Handbook. (1989). National Fuel Efficiency Service Ltd., Graham & Trotman."

CPD22503 PETROCHEMICAL & PETROLEUM REFINING TECHNOLOGY

This course focus on the processing involved in petroleum refining such as pre-treatment, separation, conversion and treatment. It also covers the subtopic of petroleum exploration, composition and classification of crude oil, crude assay and blending of petroleum product. This course also covers the processing of natural gas and petrochemical synthesis.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve the problems involve in petroleum refining, natural gas and petrochemical synthesis.
2. Assess the processes involve in petroleum refining, natural gas and petrochemical.
3. Perform analysis of petroleum product and natural gas by following standard application.

CPD22703 PLANT MAINTENANCE & INSPECTION

This course is to provide fundamental knowledge in plant maintenance and inspection. It also introduces students to the importance of maintenance strategy and principles.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain basic management and maintenance in a plant process.
2. Relate between maintenance, commissioning, shutdown and start up procedure.
3. Propose related maintenance strategy and inspection of plant equipment.

CPD22803 OIL & FAT PROCESS TECHNOLOGY

This course introduces students to edible oil processing from raw materials to final product. It includes origin of edible oils, feedstock characteristic, fatty acid isolation and glycerine recovery and purification, fatty acids clusters, reactions and industrial application of oil and fat, the analysis of fatty acid and esters.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Relate the fundamental knowledge of Oil and Fat Technology with engineering parts.
2. Develop potential products or modification process as entrepreneurship projects.
3. Perform experimental activities associate with oil and fats technology.

Biotechnology & Bioengineering

Elective 1: CBD22003 Introduction to Bioprocess Technology

Elective 2: CBD22103 Principle of Microbiology

Elective 3: CBD22203 Analytical Methods in Bioprocessing

Elective 4: CBD22303 Techniques in Bioproduct Recovery

CBD22003 INTRODUCTION TO BIOPROCESS TECHNOLOGY

This course encompasses on the scope and applications of bioprocess technology in making use of microbial, animal and plants cells and components of cells such as enzymes to manufacture new products. The scope of this subject includes fermentation technology, cell growth kinetics, bioreactors, inocula development, sterilization processes, agitation and aeration.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the principles and scopes of bioprocess engineering technology including its application.
2. Demonstrate skills in fermentation operations.
3. Display ability to work and communicate effectively in team either as a leader or ordinary member.

CBD 22103 PRINCIPLES OF MICROBIOLOGY

This is an introductory course to basic microbiology including the diversity, characterization, microbial growth & cultivation as well as industrial application of microorganism such as bacteria, viruses and fungi.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Distinguish microorganism through its principles and characterization.
2. Perform laboratory works related to microbiological techniques.
3. Discuss the implementation of microbial technology in bioprocess industry through communication and presentation.

CBD 22203 ANALYTICAL METHODS IN BIOPROCESSING

This is a study of the fundamental biological material principle such as amino acids & peptides, protein, enzymes, carbohydrates, lipids, natural products and discusses the current innovative technology in the processing of biological products

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain general knowledge, characteristic and properties of biological material.
2. Show ability to identify problems, and solve using source of biological material principles.
3. Acquire knowledge and skills for lifelong learning.

CBD22303 TECHNIQUES IN BIOPRODUCT RECOVERY

This subject aims to expose the student about product recovery methods such as filtration, centrifugation, cell disruption, solvent extraction, chromatography, membrane processes, evaporation and drying. Besides, student will be able to understand the downstream processing with various types unit operation equipment.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the appropriate techniques in bioproduct recovery stages.
2. Perform the operation in downstream processing.
3. Discuss the knowledge and techniques in bioproduct recovery to meet the desired needs of society.

Advanced Material

Elective 1: CRD22303 Rubber Processing

Elective 2: CRD22103 Plastics Processing

Elective 3: CRD22203 Latex Science & Technology

Elective 4: CRD22303 Composite Technology

CRD22303 Rubber Processing

This module is aimed to convey an introductory knowledge of rubber technology. Various processing methods such as mixing, moulding, extrusion and calendering are also discussed. Troubleshooting of common moulding, extrusion and calendering problems are also highlighted. The relationship between different rubber properties, rubber chemicals, manufacturing techniques and applications is emphasized.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Analyze the types, properties, rubber manufacturing techniques, testing and applications of rubber.
2. Perform the correct rubber processing and analysis techniques according to different requirements.
3. Demonstrate entrepreneurial elements in selected lab report.

CRD22103 Plastics Processing

This course includes introduction to plastics, injection moulding, extrusion, blow moulding, thermoforming, processing of reinforced plastics, other processes, auxiliary equipment and secondary operations.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Differentiate various types of plastic materials, additives, plastic processing techniques and defects in the finished products.
2. Perform correct plastic processing techniques according to different processing techniques and requirements.
3. Demonstrate ability to work in a team either as a leader or ordinary member in completing practical session.

3. Susan E.M. Selke, John D. Culter, Ruben J. Hernandez, (2004), Plastics Packaging Properties, Processing, Applications, and Regulations, 2nd Ed, Hanser Gardner Publications.

CRD22203 Latex Science & Technology

This is an elementary course aimed at providing students with latex science and technology knowledge; enhancing skills in preparation, testing and evaluation of latex concentrate as well as the basic principles in latex manufacturing and product testing.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Integrate fundamental knowledge of latex science and technology through various applications of latex.
2. Perform laboratory works of latex concentrate correctly.
3. Demonstrate role either as a leader or ordinary member in a team effectively during laboratory work sessions.

6. Anderson C.D and E.S. Daniels. (2003). Emulsion, Polymerization and Latex Applications, Smithers Rapra"

CRD22303 Composite Technology

This module is aimed to convey a basic knowledge of polymer composites. The advantages of polymer composites and their applications are highlighted. The common polymeric materials that can be used as composite matrix and reinforcement are discussed in detail. Common polymer composite manufacturing processes are also discussed in detail.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Analyze the components of polymer composites, functions, commercial applications and composite manufacturing.
2. Perform practical-based project on composite materials.
3. Present an enthusiastic and well practiced presentation on practical-based project.

Environment Engineering Technology and Sustainability

Elective 1: CED22003 Wastewater Treatment Technology

Elective 2: CED22103 Air Pollution Control Technology

Elective 3: CED22203 Introduction to Environmental Engineering Technology

Elective 4: CED22303 Solid and Hazardous Waste Management

CED22003 Wastewater Treatment Technology

Students will be introduced with basic principles of wastewater treatment plant and residuals processing unit operations (physical, biological and chemical treatment options), the concepts of effluent residuals disposal and reuse particularly when treating and removing water pollutants. Other than that, students will be exposed with sustainable treatment methods for the removal of heavy metal from wastewater at reasonable cost and a fieldwork will be implemented at a various industry to gain more knowledge and hands-on experience.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Analyze the physical, chemical and biological parameters of raw wastewater with explanation on how these parameter can help in determining the appropriate treatment units for a municipal or industrial wastewater treatment plant.
2. Perform laboratory work based on the manual or guidelines given or guided by the instructor.
3. Able to follow the instruction/safety procedure and use the appropriate tools during the laboratory experiments.

2. Metcalf & Eddy. (1991). Wastewater Engineering: Treatment, Reuse and Disposal. (3rd edition).McGraw Hill.
3. Hammer MJ. (2004). Water and Wastewater Technology. 5th edition. Prentice Hall.
4. Masters GM.(1998).Introduction to Environmental Engineering and Science. Prentice-Hall.

CED22103 Air Pollution Control Technology

An operating and measurement equipment typical used in controlling air pollutants are introduced. History of air pollution and air pollution legislation are discussed. Air quality management techniques are introduced. Physical principles used to detect and measure pollutants in the ambient air and from the sources are introduced. Laboratory experiments involving air controlling device unit to remove CO₂, SO₂, NO_x, CO, and particulate matter are introduced. An awareness of modern environmental protection legislation and ethical considerations are discussed.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Discuss air pollution management practices in term of its regulations, strategies and technologies. (C4,PLO1)
2. Apply appropriate methods for measurement, control, and prevention of air pollution with respect to industrial economic viability and availability. (P3,PLO4)
3. Demonstrate good communication and showing respect to one another. (A3,PLO10)

2. Masters, G.M.(1998). Introduction to Environmental Engineering and Science. Prentice-Hall.
3. Purwer, D. (1997). Fundamental Aspects of Pollution Control and Environment. Elsevier, London.

CED22203 Introduction to Environmental Engineering Technology

The course will provide students with basic principles of environmental engineering technology with relation to natural environment system, principles of pollution and treatment/control methods of various environmental pollutants. Several important law and regulations will enhance student's knowledge on institutional environment.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Demonstrate knowledge in applied engineering processes, mathematics, and sciences to manage environmental challenges and able to recognise, explain and discuss the concepts of resilience and sustainable development.
2. Perform fieldwork and laboratory analysis by applying the knowledge gain during classes.
3. Design solution through problem-solving skills by means of information gathering, social interaction within team and communication of results to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

3. Masters, Gilbert M and Ela, Wendell (2008). Introduction to Environmental Engineering and Science, 3rd Ed., Prentice Hall"

CED22303 Solid and Hazardous Waste Management

This course will introduce the students to waste management, emphasizing on waste accumulation, generation rates, characteristics, handling, storage and disposal options, pollution prevention, environmental auditing, remediation, cleanup and modern combustion processes such as engineered incineration systems. The important impact of various treatment methods available in both type of waste management with respect to human and environmental health will be taken into account. Furthermore, Characterization of solid wastes and introduction to pertinent federal and state regulations will be discussed. On the other hand, Environmental protection legislation and ethical considerations will also be discussed.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Infer the basic principles of waste management, processing methods, 6Rs, treatment, disposal, remedial action and current issues related to solid and hazardous waste management.
2. Organize a case study on solid waste management activity involving with the suitable stakeholder.
3. Participate actively in class/project/discussion activity.
