ACADEMIC ACTIVITIES CALENDAR 2023

DESCRIPTION	JULY SEMESTER
Semester Registration for Returning Students	Week 0 - 1
Online Semester Registration is CLOSED	Week 2
Late Semester Registration	Week 1
Appeal to Reactivate Student Status	Week 4
Deferment from Study After Week 5 – Pay full Tuition Fees & subjects will recorded as 'W'	Week 1 – 6
Add Subject (ONLINE - ECITIE)	Week 0 – 1
Drop Subject (ONLINE- ECITIE)	Week 1 – 4
Verifying Subject Registration (ONLINE - ECITIE)	Week 3 – 4
Correction of records only on: a) Wrong Subject Code b) Change Subject Group After Week 4 – Penalized at minimum RM50 for each request. After Week 9 - Penalized at minimum RM100 for each request.	Week 2 – 4
	Week 5 - 6
	Week 7 onwards
Subject Withdrawal (MANUAL - FORM)	Week 5 – 6
Draft of Final Examination Timetable released	Week 6
Final Examination Timetable released	Week 7
BAR List released	Week 7
FINAL EXAMINATION	Week 9

ACADEMIC TOP MANAGEMENT TEAM UNIKL MICET

Associate Professor Ts. Dr. Zulhafiz bin Tajudin
Dean of UniKL MICET

ACADEMIC STAFF MEMBER OF UNIKL MICET

TECHNICAL FOUNDATION SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	SITI HARTINI BINTI HAMDAN (Ts. Dr) (Head of Section)	PhD (MECHANICAL ENGINEERING) TRIBOLOGY	SENIOR LECTURER
2.	MR. ABDUL HAKIM BIN HJ ABU BAKAR	MASTER ELECTRICAL ENGINEERING	SENIOR LECTURER
3.	MS. ASIMI ANA BINTI AHMAD	MASTER OF ENGINEERING (CHEMICAL)	LECTURER
4.	MS. AZLINA DIN	MASTER OF COMPUTER SCIENCE	LECTURER
5.	HANIZA BINTI KAHAR (Ts.)	MASTER OF SCIENCE (ANALYTICAL CHEMISTRY & INSTRUMENT)	LECTURER
6.	MS. IZUME AYUNA BINTI MOHAMED KHAMIL	MASTER OF INFORMATION TECHNOLOGY	LECTURER
7.	MR. MOHD NASIR MAHMUD	MASTER OF MATHEMATICS	LECTURER
8.	MR. MOHD NIZAM BIN ZAHARI	MASTER OF ENGINEERING TECHNOLOGY (GREEN & ENERGY EFFICIENT BUILDINGS)	LECTURER
9.	NAZATULSHIMA BINTI HASSAN (Dr)	PhD (BIOSTATISTIC)	SENIOR LECTURER
10.	MS. NURUL NABIHAH BINTI RAHMAN	MASTER OF ENGINEERING MATHEMATICS	LECTURER
11.	MS. ZAIDA RAHAYU BINTI YET	MASTER OF SCIENCE	SENIOR LECTURER
12.	MS. SITI NUR ELMI BINTI ABDUL AZIZ	MASTER OF SCIENCE	LECTURER
13.	MS. TEO SIEW HWAY	MASTER OF INFORMATION TECHNOLOGY	LECTURER
14.	YUSHAZAZIAH BINTI MOHD YUNOS (Dr)	PhD (MECHANICAL ENGINEERING)	SENIOR LECTURER
15.	MS. NORHAYATI BINTI MOHD IDRUS	MASTER (CHEMISTRY)	LECTURER

PROCESS ENGINEERING TECHNOLOGY SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	MS. NORULAKMAL BINTI NOR HADI (Head of Section)	MASTER OF SCIENCE	SENIOR LECTURER
2.	AHMAD AZAHARI BIN HAMZAH (Dr)	PhD (ELECTRICAL ENGINEERING)	SENIOR LECTURER
3.	MS. AIZA SYUHANIZ BINTI SALLEH	MASTER OF ENGINEERING	LECTURER
4.	ALIFF RADZUAN BIN MOHAMAD RADZI (Ts. Dr)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
5.	AMIN SAFWAN BIN ALIKASTURI (Dr)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
6.	MR. AZRIN BIN ABDUL RAHMAN	MASTER OF SCIENCE (PROCESS PLANT MANAGEMENT)	SENIOR LECTURER
7.	MS. FARIDAH BINTI GHAFAR	MASTER OF SCIENCE	SENIOR LECTURER
8.	INDOK NURUL HASYIMAH BINTI MOHD AMIN (Assoc. Prof. Dr.)	PhD (CHEMICAL ENGINEERING & PROCESS)	ASSOCIATE PROFESSOR
9.	KELLY YONG TAU LEN (Assoc. Prof. Dr.)	PhD (MECHANICAL SCIENCE & ENGINEERING)	ASSOCIATE PROFESSOR
10.	LAW JENG YIH (Dr)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
11.	MS. MARMY ROSHAIDAH BINTI MOHD SALLEH	MASTER OF ENGINEERING	LECTURER
12.	MOHD. RAZEALY BIN ANUAR (Dr.)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
13.	MS. NADIA BINTI ISA	MASTER OF SCIENCE	SENIOR LECTURER
14.	NAZERAH BINTI AHMAD (Dr.)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
15.	NOR AINI BINTI BUROK (Ts.)	MASTER OF INDUSTRIAL SAFETY MANAGEMENT	SENIOR LECTURER
16.	NOR SHAHIRAH BINTI MOHD NASIR (Dr)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
17.	MR. SYAHIDI FADZLI BIN ALFAN	MASTER OF SCIENCE (INDUSTRIAL & TECHNOLOGY MANAGEMENT)	LECTURER
18.	MR. SYED AZHAR BIN SYED AB RAHMAN	MASTER OF SCIENCE (CHEMICAL ENGINEERING)	SENIOR LECTURER
19.	WAN NOOR AIDAWATI BINTI WAN NADHARI (Dr.)	PhD (BIORESOURCE, PAPER AND COATINGS TECHNOLOGY)	SENIOR LECTURER
20.	ZAINAL ABIDIN BIN MOHD YUSOF (Ts.)	MASTER OF SCIENCE	SENIOR LECTURER
21.	ZULHAFIZ BIN TAJUDIN (Assoc. Prof. Ts. Dr.)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER

BIOENGINEERING TECHNOLOGY SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	MS. FARA WAHIDA BINTI AHMAD HAMIDI (Head of Section)	MASTER OF SCIENCE (BIOPROCESS ENGINEERING)	LECTURER
2.	LEONG CHEAN RING (Dr) (Head of Section – R&I)	PhD IN MEDICINE	SENIOR LECTURER
3.	MOHAMAD ZULKEFLEE BIN SABRI (Ts. Dr)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
4.	NIK IDA MARDIANA BINTI NIK PA (Dr.)	PhD (MICROBIAL BIOTECHNOLOGY)	SENIOR LECTURER
5.	MS. NORHANI BINTI JUSOH	MASTER OF ENGINEERING	SENIOR LECTURER
6.	NURDIYANA BINTI HUSIN (Dr.)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
7.	NURUL FAEZAWATY BINTI JAMALUDIN (Ts.)	MASTER OF SCIENCE	SENIOR LECTURER
8.	ROZYANTI BINTI MOHAMAD (Ts. Dr)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
9.	RUZAINAH BINTI ALI @JAAFAR (Assoc. Prof. Dr.)	PhD (BIOTECHNOLOGY)	ASSOCIATE PROFESSOR
10.	ZAINATUL 'ASYIQIN BINTI SAMSU (Ts. Dr)	PhD (INDUSTRIAL BIOTECHNOLOGY)	SENIOR LECTURER

ENVIRONMENT AND POLYMER ENGINEERING TECHNOLOGY SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	Dr FAHMI ASYADI BIN MD YUSOF (Head of Section)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
2.	AMELIA BINTI MD SOM (ChM. Dr)	PhD (GEOENVIRONMENT ENGINEERING)	SENIOR LECTURER
3.	MS. KHAIRUL NADIAH BINTI IBRAHIM	MASTER OF TECHNOLOGY	SENIOR LECTURER
4.	MR. MOHD SYAZWAN BIN MOHD GHAZALI	MASTER OF SCIENCE	LECTURER
5.	NOR ZALINA BINTI KASIM (Dr.)	PhD (CIVIL ENGINEERING)	SENIOR LECTURER
6.	ROBERT THOMAS BACHMANN (Prof. Dr.)	PhD (ENVIRONMENTAL ENGINEERING TECHNOLOGY)	PROFESSOR
7.	SITI NOORAIN BINTI ROSLAN (Dr.)	DOCTOR OF ENGINEERING (CIVIL & ENVIRONMENTAL ENGINEERING)	SENIOR LECTURER
8.	NORILHAMIAH BINTI YAHYA (Ts. Dr.)	PhD (FUEL CELL ENGINEERING)	SENIOR LECTURER
9.	MS. MAZLINA BINTI GHAZALI	BACHELOR OF ENGINEERING (HONS) IN POLYMER ENGINEERING	ASST. LECTURER
10.	MR. MOHD EDYAZUAN BIN AZNI	MASTER OF ENG. TECH. (GREEN & ENERGY EFFICIENT BUILDINGS)	LECTURER
11.	MR. MUAZZIN BIN MUPIT	MASTER OF SCIENCE	SENIOR LECTURER
12.	NOR NADIAH BINTI MOHAMAD YUSOF (Dr)	PhD (ENERGY & ENVIRONMENT SCIENCE)	SENIOR LECTURER
13.	ONG SIEW KOOI (Assoc. Prof. Ts. Dr.)	PhD (POLYMER TECHNOLOGY)	ASSOCIATE PROFESSOR
14.	RAJA NAZRUL HAKIM BIN RAJA NAZRI (Dr)	PhD (MATERIAL & METALLURGICAL ENGINEERING)	SENIOR LECTURER
15.	MS. SUHAINI BINTI MAMAT	MASTER OF ENGINEERING	LECTURER
16.	ZAIHAR BIN YAACOB (Dr.)	PhD (INDUSTRIAL MATHEMATICS)	SENIOR LECTURER

FOOD ENGINEERING TECHNOLOGY SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	MOHD ZULKHAIRI BIN ABDUL RAHIM (ChM. Dr.) (Head of Section)	PhD (CHEMISTRY)	SENIOR LECTURER
2.	ABDUL MANAN BIN DOS MOHAMED (Assoc. Prof. Dr.)	PhD (BIOSCIENCE & BIOTECHNOLOGY)	ASSOCIATE PROFESSOR
3.	FARAH SALINA BINTI HUSSIN (Dr)	PhD (FOOD BIOTECHNOLOGY)	SENIOR LECTURER
4.	HARUN BIN SARIP (Assoc. Prof. Ts. Dr.)	PhD (FOOD TECHNOLOGY)	ASSOCIATE PROFESSOR
5.	KHAIRUL FAIZAL BIN PA'EE (Dr.)	PhD (FOOD & NUTRITIONAL SCIENCE)	SENIOR LECTURER
6.	MS. LILY SUHAILA BINTI YACOB	MASTER OF ENVIRONMENT (ENVIRONMENTAL SCIENCE)	LECTURER
7.	MASNIZA BINTI MOHAMED @ MAHMOOD (Dr)	PhD (KEJURUTERAAN KIMIA DAN PROSES)	SENIOR LECTURER
8.	NOR ZANARIAH BINTI SAFIEI (Dr.)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
9.	NORIZA BINTI AHMAD (Ts. Dr)	PhD (FOOD SCIENCE & TECHNOLOGY)	SENIOR LECTURER
10.	NUR AQILAH BINTI HAMIM (ChM. Ts.)	MASTER OF PLANT BIOTECHNOLOGY	SPECIALIST
11.	MS. RINANI SHIMA BINTI ABD. RASHID	MASTER OF SCIENCE (FOOD TECHNOLOGY)	SENIOR LECTURER
12.	SHARIFAH SOPLAH BINTI SYED ABDULLAH (Ts Dr)	PhD (ENVIRONMENTAL ENGINEERING)	SENIOR LECTURER
13.	SHARIFAH MARIAM BINTI SAYED HITAM (Ts. Dr.)	PhD (BIOPROCESS ENGINEERING)	SENIOR LECTURER
14.	MUHAMAD YUSUF BIN HASAN (Ts. Dr.) (Deputy Dean of IIIP)	PhD (BIOPROCESS ENGINEERING)	SENIOR LECTURER
15.	MR. MUHAMMAD SHARIR BIN ABDUL RAHMAN	MASTER OF CHEMICAL ENGINEERING	LECTURER
16.	MR. AHMAD NORSYUKRI BIN AMIRUDIN	BACHELOR OF SCIENCE (FOOD SERVICE MANAGEMENT)	ASSISTANT LECTURER

CHEMICAL ENGINEERING SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	NOOR AINA BINTI MOHD NAZRI (Dr.) (Head of Section)	PhD IN ENGINEERING (GAS)	SENIOR LECTURER
2.	WONG CHEE SIEN (Dr.)	PhD (BIOPROCESS ENGINEERING)	SENIOR LECTURER
3.	CHIN LIP HAN (Ir. Dr.)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
4.	CHONG YUAN FOONG (Ir.)	BACHELOR OF ENGINEERING (CHEMICAL)	SPECIALIST
5.	FARRA WAHIDA BINTI SHAARANI (Dr)	PhD (CHEMICAL PROCESS ENGINEERING)	SENIOR LECTURER
6.	MS. NOR NABIHA BINTI MD ZAN	MASTER (ENGINEERING SCIENCE)	LECTURER
7.	RAPIDAH BINTI OTHMAN (Dr)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
8.	SITI NURUL ATIKAH BINTI ABD HALIM (Dr.)	PhD (CHEMICAL ENGINEERING)	SENIOR LECTURER
9.	SUZANA BINTI WAHIDIN (Assoc. Prof. Dr)	PhD (BIOPROCESSING ENGINEERING)	ASSOCIATE PROFESSOR

STUDENT DEVELOPMENT SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	MS. INTAN NORJAHAN BINTI AZMAN (Head of Section)	MASTER OF ARTS IN ENGLISH LANGUAGE	LECTURER
2.	ANISAH BAHYAH AHMAD (Dr.)	PhD (ISLAMIC CIVILIZATION)	SENIOR LECTURER
3.	AZMAN BIN YUSOF (Assoc. Prof. Dr.)	PhD (PHILOSOPHY AND CIVILIZATION STUDIES)	ASSOCIATE PROFESSOR
4.	MS. AZU FARHANA BINTI ANUAR	MASTER OF ARTS (ENGLISH COURSE)	LECTURER
5.	MS. MARIATI BINTI MOHD SALLEH	MASTER OF EDUCATION	LECTURER
6.	MS. NOORHAYATI BINTI SAHARUDDIN	MASTER OF ARTS IN ENGLISH LANGUAGE	SENIOR LECTURER
7.	MS. ROSIAH BINTI OTHMAN	MASTER OF CORPORATE COMMUNICATION	LECTURER
8.	MS. SA'ADIAH BINTI HUSSIN (Head of Section – QA)	MASTER OF SCIENCE (CORPORATE COMMUNICATION)	SENIOR LECTURER

IIIP SECTION

NO.	NAME	HIGHEST QUALIFICATION	DESIGNATION
1.	MR. ABD RAZAK BIN HAJI MOHD YUSOFF	MASTER OF BUSINESS ADMINISTRATION	LECTURER
2.	MR. NORAZMI BIN OMAR	MASTER OF BUSINESS ADMINISTRATION	LECTURER

PROGRAMME BY SECTION

FOOD ENGINEERING TECHNOLOGY SECTION

Diploma in Chemical Engineering Technology (Food)

JPT/BPP (R2/524/4/0038) 10/24, MQA/FA14409

This programme focuses on the application of principles of chemical engineering technology and food chemistry to the large-scale processing of food. Foods must be nutritious, i.e., provide the essential nutrients for growth and health; they must be safe, free from dangerous micro-organisms and chemical contaminants; and, if they are to be consumed at all, they must be attractive in taste and appearance. In this programme, students learn how to adapt the unit operations of traditional chemical engineering to the specific requirements of food processing. The main objective of this programme is to make it possible for well-trained chemical engineers and technologist to work in the food industry, possibly one of the largest manufacturing industries in Malaysia.

The programme includes exposure to areas of food chemistry, food microbiology, food engineering, food safety, food processing and the nutritive value of food. It is also designed to provide depth and breadth in the relevant physical and biological sciences in which food science and technology is based.

Career Information

Our graduates have unlimited opportunities in getting jobs either in public or private sectors. In public sectors, they may work at food related government bodies like Department of Health, Educational Institutions, MARDI, SIRIM, MPOB, and others. They may join various industries like cereal manufacturing, bakery products, sugar refinery, manufacturing of flour-based sweetening agent, chocolate and confectionery products, fish processing, milk and dairy products, fruits and vegetable products, canning industry, edible oils and its products and beverages.

The scope of career may vary from production supervisors, quality assurance supervisors, technicians, assistant chemist, R&D assistants, operators, and others.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO) - DCF

- 1) UniKL graduates who are knowledgeable, competent and innovative which will contribute towards the requirement of the human capital in chemical and/or process/food/polymer/bioprocess/environment engineering technology related industry;
- 2) UniKL graduates who are effective leaders with teamwork skills, as well as verbal and nonverbal interpersonal communication skills;
- 3) UniKL graduates who are committed towards the importance of lifelong learning and continuous improvement;
- 4) UniKL graduates who are professional, ethical, and socially responsible;
- 5) UniKL graduates who are capable of embarking on business and technopreneurial activities.

PROGRAMME LEARNING OUTCOMES (PLO) - DCF

PLO 1	Knowledge : Apply knowledge of applied mathematics, applied science, engineering fundamentals and an engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices in chemical and process/food/polymer/bioprocess/environment engineering technology.
PLO 2	Problem analysis : Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to their field of activity (DK1 to DK4).
PLO 3	Design/development of solutions : Design solutions for well-defined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations (DK5).
PLO 4	Investigation : Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurements.
PLO 5	Modern Tool Usage : Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations (DK6)
PLO 6	The Engineer and Society : Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems (DK7).
PLO 7	Environment and Sustainability : Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts.
PLO 8	Ethics : Understand and commit to professional ethics and responsibilities and norms of technician practice.
PLO 9	Individual and Team Work : Function effectively as an individual, and as a member in diverse technical teams.
PLO 10	Communications : Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
PLO 11	Project Management and Finance : Demonstrate knowledge and understanding of engineering management principles, business practices, and technopreneurial competencies, as well as identify business opportunities, and apply these to one's own work, as a member and leader in a technical team and to manage projects in multidisciplinary environments.
PLO 12	Life Long Learning : Recognize the need for, and have the ability to engage in independent updating in the context of specialized technical knowledge.

PROCESS ENGINEERING TECHNOLOGY SECTION

Diploma in Chemical Engineering Technology

JPT/BPP (R2/524/4/0034) 10/24, MQA A10853

As Industrial Revolution 4.0 such as additive manufacturing, advanced material, big data, and advanced simulation continue to redefine industrial production, Malaysia's chemical industry is increasingly searching for highly skilled manpower with Industry 4.0-ready skill sets to enhance its transformation.

In order support this, UniKL MICET will begin offering a 2.5-year diploma programme in Chemical Engineering Technology (DCET) in July 2021. The curriculum is designed to produce manpower with the requisite skills for economic and national development of the nation. The four major specialisations in the program are Sustainable Process Engineering, Biotechnology & Bioengineering, Advanced Material, and Environmental Engineering Technology & Sustainability.

This program's courses are enhanced by embedding Professional Certifications including Smart 3D Modelling Software (Intergraph) and Ergonomic Trained Person. With credit transfer eligibility of up to 57 credits, graduates from this programme can continue and complete Bachelor of Chemical Engineering Technology at UniKL MICET in 2.5 years. This programme is also in line with the post pandemic socioeconomics drivers, which are focused on energy, smart technology and systems, water and food, environment, and biodiversity.

CAREER PATH

- Chemical Manufacturing Companies
- Oleochemical Industries
- Bioplastic Industries
- Nutraceuticals Industries
- Solid Waste and Wastewater Management Sector
- Petroleum and Petrochemical Industries
- Safety and Health
- Rubber and Latex Industries
- Biopharmaceutical Companies and Medical Research Institutes
- Primary Production Executive
- QA Executive
- Materials Analysis Technician
- Energy and Transportation Industries
- Design and Simulation Industries
- Cosmeceutical Industries
- Environmental Consulting Firms
- Chemical Production Assistant Engineer
- Plating Technician
- Plant Assistant Engineer
- Plant 3D Software Trainer
- Laboratory Technician
- Chemical Production Assistant
- Chemical Sales & Service Technician
- Compounding Supervisor

PROGRAMME EDUCATIONAL OBJECTIVES (PEO) - DCET

- 1) UniKL graduates who are knowledgeable, competent and innovative which will contribute towards the requirement of the human capital in chemical and/or process/food/polymer/bioprocess/environment engineering technology related industry;
- 2) UniKL graduates who are effective leaders with teamwork skills, as well as verbal and nonverbal interpersonal communication skills;
- 3) UniKL graduates who are committed towards the importance of lifelong learning and continuous improvement;
- 4) UniKL graduates who are professional, ethical, and socially responsible;
- 5) UniKL graduates who are capable of embarking on business and technopreneurial activities.

PROGRAMME LEARNING OUTCOMES (PLO) - DCET

PLO 1	Knowledge : Apply knowledge of applied mathematics, applied science, engineering fundamentals and an engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices in chemical and process/food/polymer/bioprocess/environment engineering technology.
PLO 2	Problem analysis : Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to their field of activity (DK1 to DK4).
PLO 3	Design/development of solutions : Design solutions for well-defined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations (DK5).
PLO 4	Investigation : Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurements.
PLO 5	Modern Tool Usage : Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations (DK6)
PLO 6	The Engineer and Society : Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems (DK7).
PLO 7	Environment and Sustainability : Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts.
PLO 8	Ethics : Understand and commit to professional ethics and responsibilities and norms of technician practice.
PLO 9	Individual and Team Work : Function effectively as an individual, and as a member in diverse technical teams.
PLO 10	Communications : Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
PLO 11	Project Management and Finance : Demonstrate knowledge and understanding of engineering management principles, business practices, and technopreneurial competencies, as well as identify business opportunities, and apply these to one's own work, as a member and leader in a technical team and to manage projects in multidisciplinary environments.
PLO 12	Life Long Learning : Recognize the need for, and have the ability to engage in independent updating in the context of specialized technical knowledge.

WID41009 INDUSTRIAL TRAINING

This course exposes students to real industrial environment and gives them the opportunity to practice the knowledge and skills they have acquired during their academic years.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Demonstrate the right work manner and attitude with deliberation on safety and health in a working environment.
2. Perform tasks with minimum supervision and meet the company's expectations.
3. Apply technical knowledge, analytical and problem-solving skills to accomplish task assigned by the company.
4. Report effectively on work experience during attachment, including knowledge and skills acquired, in oral and written form.

WBD20203 INTRODUCTION TO ENTREPRENEURSHIP

WQD10103 TECHNICAL MATHEMATICS 1

The course covers general mathematical components involving algebra, trigonometry and complex number. It emphasizes on developing students' competence to prepare them for higher level Mathematics. The main method of delivery combine lecture, tutorial and drilling activities to generate students' interest.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve operations and problems related to algebra.
2. Apply trigonometric functions in solving triangular problems.
3. Solve complex number operations in several forms.

WQD10203 TECHNICAL MATHEMATICS 2

This course provides fundamental concepts of calculus where students will be exposed to the theories and applications of trigonometry, functions, limits, differentiation and integration. These are essential mathematical components which students will encounter in science and engineering technology courses during their academic programme.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the theories and concepts of trigonometry in problem solving.
2. Solve operations and problems related to functions.
3. Solve practical problems using differentiation and integration techniques.

CLD 21102 STATISTICS

This course is aimed at introducing students to basic language of statistics and to apply statistical concepts in engineering. Students will be exposed to selecting, computing and interpreting basic statistical tools.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Illustrate and explain a descriptive and inferential statistics for interpreting results (C3, PLO1).
2. Apply appropriate statistical models or methods to solve statistical problems (C3, PLO2).
3. Interpret the outcome from statistical software output with the statistical concept (C4, PLO3).

CLD10003 GENERAL CHEMISTRY

General Chemistry provides fundamental knowledge in chemistry. This course will equip students with essential knowledge that will enable them to be used and applied in chemical engineering technology and any related application. Students will also be exposed to basic laboratory skills including tools, chemicals, techniques and safety awareness.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply knowledge on solving problems related to basic principles of chemistry. (C3, PLO1)
2. Handle chemicals and apparatus correctly and properly in the application of basic principles of chemistry during laboratory sessions. (P3, PLO4)
3. Perform effectively as a team member in applying good laboratory techniques (A3, PLO9)

CLD10803 ORGANIC ANALYTICAL CHEMISTRY

This course provides students with the basic concepts in organic chemistry as well as the analytical techniques used in the field of chemistry.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the phenomena, basic concepts, laws and principles in organic and analytical chemistry (C3, PLO1).
2. Perform laboratory works related to reaction of organic compound (P4, PLO4)
3. Assist affectively as a team member in performing good laboratory technique (A3, PLO9)

CLD20002 OCCUPATIONAL SAFETY AND HEALTH

This course will impart knowledge and create an awareness to occupational safety and health. Students will be exposed to the design, techniques, legal, society and cultural issues in making the work place as safe as possible.

Learning Outcomes:

Upon completion of this course students should be able to:

- Illustrate the ability to recognize the types of Hazards, the appropriate Control Measures and risks associated with it, in accordance to Occupational Safety & Health Act (1994) or ACT 154 towards Safety and Health Issues at Workplace (C3, PLO6).
- Collaborate with Team Members in carrying out activities related to Occupational Safety and Health (P2, PLO9)
- Demonstrate business practices and opportunities as well as technopreneurial competencies to all work activities related to Occupational Safety And Health (P2, PLO11).

CLD20402 TRANSPORT PROCESS

This course will provide students with the knowledge of heat and mass transfer which will be useful for their study in later years.

Learning Outcomes:

Upon completion of this course students should be able to:

- Explain knowledge of three modes of heat transfer which are conduction, convection and radiation (C2, PLO1)
- Apply basic calculation in solving problems related to heat transfer (C3, PLO2)
- Perform laboratory works safely according to the related operating manual (P3, PLO4)

References:

CLD22002 ENGINEERING STATISTICS

This course is a beginner level course in elementary applied statistics. This course covers introduction to statistics, descriptive data analysis, introduction to probability, probability distribution, sampling distribution, estimation, hypothesis testing and simple linear regression and correlation. Students will be able to apply statistical concepts to real situations.

Learning Outcomes:

Upon completion of this course students should be able to:

- Explain a descriptive and inferential statistics for interpreting results.
- Apply appropriate statistical methods to calculate the probability and solve statistical problems.
- Interpret the outcome from statistical software output with the statistical concept.

References:

CLD12003 GENERAL CHEMISTRY

A one-semester course designed to prepare engineering technology students with basic knowledge and hands-on skill in Chemistry. It will emphasize on the importance of knowledge in units of measurement, structure of atom and matter, quantitative relationship, the mole, chemical reaction, solution chemistry, introduction to acid base, electrochemistry and gaseous state of matter. It will create basic practical hands-on related laboratory skills.

Learning Outcomes:

Upon completion of this course students should be able to:

- Apply appropriate knowledge on solving problems related to basic principles of chemistry.
- Follow the correct way of handling chemicals and apparatus with during conducting experiments.
- Assist affectively as a team member in preparing group assignments related to basic principles of chemistry.

References:

CLD10803 ORGANIC ANALYTICAL CHEMISTRY

This course provides students with an introduction into organic chemistry and the role of analytical techniques and tools used in identifying organic compounds. The topic include the theory and general applications of spectroscopy and chromatography techniques.

Learning Outcomes:

Upon completion of this course students should be able to:

4. Apply the phenomena, basic concepts, laws and principles in organic and analytical chemistry.
5. Perform laboratory works related to reaction of organic compound.
6. Assist affectively as team member in preparing group assignments related to basic principles of organic and analytical chemistry.

References:

5. Chan, K. S. and Tan, J. (2016), Understanding Advanced Organic and Analytical Chemistry: The Learner's Approach, (Revised Edition), WS Education

7. Solomon, T.W.G., (2017), Organic Chemistry, 12th Edition, Wiley.

CLD12102 ELECTRICAL TECHNOLOGY

This course provides fundamental knowledge in electrical technology such as basic concept of electricity, circuit theorem, AC and DC circuit analysis, magnetism, principle of single and three phase system, electrical machinery and their applications.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe basic principles and practices from electrical fundamental disciplines to solve electrical problems.
2. Perform experiments and project according to the standard operating procedure given.
3. Apply basic principles of electricity, circuit theorems, electrical system, magnetism and electrical machinery.

References

1. Edward Hughes (2012) "Electrical Technology", 11th. Edition, Prentice Hall
2. Boylestad (2016), "Introductory Circuit Analysis", 13th Edition, Pearson.
3. Charles K. Alexander and Matthew N.O. Sadiku (2007), "Fundamental of Electric Circuit", 3rd Edition, McGraw-Hill

CPD12303 THERMODYNAMICS

This is an introductory course to the study of the laws that govern the conversion of energy from one form to another, the direction in which heat will flow and the availability of energy to do work. In this course, student will be introduced to the First and Second Law of Thermodynamics and its applications in the other engineering courses. In this course, students will be studying the terminology, principles, theory, and practical application of the First and Second Law of Engineering Thermodynamics..

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the basic concept and principle of thermodynamics to the various processes and systems.
2. Solve problems related to the application of thermodynamics.
3. Perform laboratory experiments safely based on procedures.

References:

1. Cengel, Yunus A., Boles, Michael A. (2006) *Thermodynamics: An Engineering Approach*, 5th edition, McGraw-Hill.
2. Moran, M.J. and Shapiro, H.N. (2014). *Fundamentals of Engineering Thermodynamics*. (8th Edition). John Wiley & Sons, Inc.
3. Wark, K. and Richards, D.E. (1999). *Thermodynamics*. (6th Edition). McGraw-Hill

CPD12403 FLUID MECHANICS

This course introduces principles of fluid mechanics and introductions to several topics, with emphasis on the incompressible case (liquids and/or gases at low speed). Topics to be covered include the introduction to fluid systems, fluid characteristics and behaviour, pressure and static fluid, internal flow (flow in pipe and conduits) and equipment in fluid flow.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Discuss the concepts of static and dynamic fluid and its application in fluid system.
2. Assess the basic theory of fluid in solving problems related fluid static and dynamic
3. Perform laboratory experiments safely based on procedures.

References:

1. Cengel, Y.A. and Cimbala, J.A. (2006). *Fluid Mechanics*. Boston: Mc Graw Hill

CPD12504 MATERIAL AND ENERGY BALANCE

This course is to introduce students to the principles and calculations used in basic chemical process systems, to acquaint students with material and energy balances and the techniques to formulate and solve problems. This course covers the basic calculations used in chemical processes. It includes units and dimensions, process variables, material balance, energy balance, single phase and multiphase systems.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve pertinent data on process variables to account for the flows to and from the process and its units.
2. Apply the concept of phase system, material balances and energy balances in chemical process plants.
3. Perform laboratory experiments safely based on procedures.

CLD10703 ENGINEERING DRAWING AND COMPUTING

This introductory course aimed at providing students with the basic concepts of computer applications used in the current practice and its application in chemical engineering technology. This course will equip students with concepts and knowledge that are essential to encounter any related problems that need to be solved using a computer application including using computer for engineering design.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply theoretical knowledge of computing application in current practice and its application in chemical engineering technology. (C3, PLO3)
2. Reproduce 2D models using basic symbols used in computing and engineering drawing. (P3, PLO4)
3. Construct a piping and instrumentation diagram by using CAD software. (P3, PLO5)

CLD10502 PRINCIPLES OF CHEMICAL PROCESS

This is an introductory course aimed at providing students with the fundamental concepts of chemical process which form the foundation for their study in later years. These concepts are essential in preparing students to formulate and solve material and energy balances on chemical process systems.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Identify the dimension of an equation and unit conversion (C2, PLO1).
2. Apply the concept of material balances and energy balances in chemical process plants (C3, PLO3).
3. Solve material balances and energy balances to account for the flows to and from the process and its units. (C3, PLO2).

CLD10603 FLUID MECHANICS

This course is an introduction to fluid mechanics and emphasizes fundamental concepts and problem-solving techniques. Topics to be covered include fluid properties, pressure, fluid static's, control volume analysis and internal flow (flow in pipes and conduits). Students will be familiarized with the equipment involved in fluid flow. The student will also be able to evaluate basic concepts in selecting and analyzing components of fluid systems

Learning Outcomes:

Upon completion of this course students should be able to:

1. Assess the basic theory of fluid in solving problems related fluid static and dynamic (C3, PLO1)
2. Discuss the concepts of static and dynamic fluid and its application in fluid system (C2, PLO2)
3. Conduct laboratory experiments related to fluid static and dynamic by following standard operating procedure and safety awareness (P3,PLO4).

CLD20102 ELECTRICAL TECHNOLOGY

This is an introductory course aimed at providing students with the fundamentals concept and knowledge of electrical technology. This course will provide students with skills and understanding to operate electrical tools and machines safely and effectively.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe basic principles and practices from electrical fundamental disciplines to solve electrical problems. (C2, PLO1)
2. Perform experiments and project according to the standard operating procedure given. (P4, PLO4)
3. Apply basic principles of electricity, circuit theorems, electrical system, magnetism, and electrical machinery. (C3, PLO2).

7. Lecture Notes: Electric Circuits – Network Theorems.

CLD20202 PROCESS INSTRUMENTATION

This course will impart knowledge and application of process instrumentation. Students will be exposed to the principle and application including the maintenance, troubleshooting and safety aspects of process instrumentation.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the working principle, maintenance and troubleshooting procedures of the measurement devices (C2, PLO1).
2. Relate the application of instruments in the real plant/factory (C3, PLO2)
3. Display the ability to conduct the experiment by following standard operating procedure and safety awareness (P2, PLO4).

CLD20302 THERMODYNAMICS

This is an introductory course aimed at providing students with the fundamental concepts in thermodynamics. These concepts are essential since the students will apply this knowledge in other engineering courses.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Identify the thermodynamics properties of pure substances using properties table (C2, PLO1)
2. Describe the applications of thermodynamics (C2, PLO3)
3. Relate the closed and open system in the First Law and Second Law of thermodynamics. (C3, PLO2)

References:

CLD20502 BASIC ENGINEERING WORKSHOP

This is an introductory course aimed at providing students with the basic mechanical engineering workshop practice. Students will be familiarized with basic principles and practical of hand tools in basic engineering workshop. The student also will be able to perform basic machining operation and basic welding operation

Learning Outcomes:

Upon completion of this course students should be able to:

1. Differentiate various tools, equipment and safety awareness in metal fabrication, machining and welding activities. (C4, PLO1).
2. Perform metal fabrication, machining, and welding process by using suitable tools and equipment. (P3, PLO4).
3. Work effectively in a team either as a leader or team member (A2, PLO9).

References:

5. Erik Oberg, Franklin D. Jones, Holbrook L. Horton, Henry H. Ryffel, (2016) *Machinery Handbook*, 30th ed., Industrial Press

CKD20003 REACTOR TECHNOLOGY

This course will impart knowledge of chemical reaction. Students will be exposed to chemical kinetics, different reactor operations, catalysis and catalytic reaction.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe the concept of chemical kinetics and the importance of catalyst in chemical reaction (C2, PLO1)
2. Solve problems related to chemical reaction and reactor design based on the concept of chemical kinetics (C3, PLO2)
3. Conduct experiments on chemical reactors safely based on procedures (P3, PLO4)

4. Hill, C. G. (2014), *Introduction to Chemical Engineering Kinetics & Reactor Design*, 2nd Edition by New York, John Wiley & Sons

CKD20103 SEPARATION TECHNOLOGY

This course will provide students with the basic principle and operations of separation in chemical engineering technology and expose students to separation technology equipment.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the basic principles and operations in chemical and mechanical separation (C2, PLO1)
2. Apply the fundamental knowledge in separation technology process (C3, PLO2)
3. Perform laboratory experiments safely (P3, PLO4)

References:

1. Geankoplis, C.J. (2018). *Transport Processes And Separation Process Principles*, 5th Edition, Prentice Hall

3. Coulson & Richardson (1983). *Chemical Engineering, Vol.2*, Pergamon Press, Oxford
- 4.

WPD39806 FINAL YEAR PROJECT

This course introduces students with ability and skills in conducting a technical project based on their specialization area. It provides students with technical writing and presentation skills.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Plan the project activities to fulfil the proposed research problem.
2. Manage and execute the project plan to accomplish project objectives.
3. Analyse project results using appropriate technique or tools.
4. Produce a project report in accordance with the specified standard format.
5. Present and defend the project outcomes effectively.

CFD20103 FOOD PROCESSING TECHNOLOGY

To impart knowledge and technical skills in processing and preservation technology of various food products.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the principle of food processing techniques applied at low, ambient or high temperature and the effect of processing techniques towards food products/ingredient. (C3, PLO1)
2. Demonstrate the working principle of food processing equipment/machinery and the ability of handling and troubleshooting of the equipment/machinery. (P3, PLO5).
3. Work with team members in planning, performing and reporting a scientific inquiry, practical or assignment related to new innovative food product and food processing technology. (A3, PLO9)

CFD20203 FOOD MICROBIOLOGY

This course aimed to provide the students with understanding of the basic function, activity, classification of microorganisms, microbiological quality of food products and food safety. The student will also obtain a good understanding of laboratory practices in food microbiology.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply theories and concepts of microorganisms and their factors that influence microbial growth in food applications, food spoilage, food intoxication and food infection (C3, PLO1).
2. Organize important technique and analysis in food microbiology (P3, PLO5).
3. Perform a scientific inquiry on food microbiology with team members. (A2, PLO9)

CFD20302 FOOD CHEMISTRY

This course aimed to provide the students with understanding of the fundamental concept of chemical properties and reactions in food.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the structure, properties and functions of food constituents and other food additives (C2, PLO1).
2. Compute scientific inquiry/assignment related to food chemistry (C3, PLO2).
3. Collaborate with team members in planning and performing scientific investigation (A3, PLO9).

CFD20403 FOOD QUALITY AND SANITATION

To provide students with knowledge of the importance of quality assurance and quality control in food industries, basic quality problems of food products, and knowledge of various quality management system that commonly applied in food industries and to provide students with knowledge on the principles and application of food hygiene in food manufacturing.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe the principles, practices and basic quality problems of food products in food industry (C2, PLO1).
2. Determine the suitable monitoring and control system to ensure it operates at its full potential to produce conforming product based from statistical methods (C4, PLO2).
3. Collaborate with team members in planning and performing scientific investigation (A2, PLO9)

CFD30003 FOOD ANALYSIS

This course will provide the principles of chemical and instrumental analysis of food and provide laboratory experience for students.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the principles and procedures of chemical, physical and instrumental analysis in food analysis (C2, PLO1).
2. Perform food sampling and food analysis using a related food instrument (P4, PLO5).
3. Collaborate with team members in planning, performing and reporting a scientific inquiry/assignment related to food analysis (A2, PLO7).

CFD30103 FOOD PACKAGING

To provide students with the principles of food packaging and application of packaging materials in food industry as well as packaging regulation and labelling requirement to be in line with Malaysian Food Act 1983 and Food Regulation 1985.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the principles of food packaging and application of packaging materials in food industries (C2, PLO1).
2. Demonstrate the typical packaging materials testing and some major packaging equipment (P3, PLO5).
3. Collaborate with team members in reporting the experimental results/assignment given (A3, PLO9).

3. Laws of Malaysia: Food Act and Regulations, MDC Publishers Sdn. Bhd. (2015).

CFD30303 SENSORY EVALUATION OF FOOD

To provide students with the basic principles and requirements and sensory evaluation.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the appropriate techniques and methods of sensory evaluation for product development (C3, PLO1).
2. Conduct appropriate statistical methods for product development and quality assurance of food (P3, PLO5).
3. Describe the principle steps in market research (A3, PLO11)

CLD22103 ENGINEERING DRAWING

This course will emphasize on introduction to engineering drawing and Piping and Instrumentation Diagram (P&ID). The contents cover the knowledge of technical drawing standard and practicing the modern tools using Computer Aided Drafting and Design (CAD) including 2D and 3D design.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Practice engineering drawing standard and P&ID.
2. Construct 2D design and 3D design parts using CAD software.
3. Assemble 3D parts including chemical process equipment and piping design.

2. Randy Shih (2018) "Learning Autodesk Inventor 2018", SDC Publication.

CPD22002 HEAT TRANSFER

This course is intended to serve as an elementary treatment of the principles of heat transfer. The primary objective of the course is to present the fundamental principles of heat transfer by relating those principles to practical, real-world applications. By showing how basic heat-transfer concepts relates to real thermal systems. Students are introduced to some of the most widely encountered applications in which heat transfer processes are vital. Second, by offering a balanced blend of basic theory and applications, this course helps bridge the gap between heat transfer theory and heat transfer practice. In addition it covers introduction to heat transfer, conduction heat transfer, convection heat transfer, radiation heat transfer and the application of heat transfer especially in heat exchanger.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain three modes of heat transfer which are conduction, convection and radiation. (C2, PLO1)
2. Apply basic calculation in solving problems related to heat transfer. (C3, PLO2)
3. Perform laboratory experiments safely based on procedures. (P3, PLO4)

2. Cengel, Y.A., (2007), Heat and Mass Transfer: A Practical Approach, 3rd Edition, McGraw Hill.

CPD22103 PROCESS INSTRUMENTATION & CONTROL

This is an Introductory Course in fundamental concept in both Process Control and Process Instrumentation as well as their application in Industry. This Course focuses on the Measurement of Pressure, Level, Temperature and Flow and also Principle of Maintenance, Troubleshooting and Safety for Process Instrumentation. In Process Control, the concepts to be covered are fundamental of Process Control, Controller Tuning and Control Strategies for Chemical Process. Last but not least, the students will also be exposed towards various Process Instrumentation And Control equipment via Laboratory Experimentations.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Employ the knowledge of instrumentation and control in chemical process flow diagram.
2. Apply the principles of instruments with different control strategies for various chemical process applications.
3. Conduct laboratory experiment safely based on procedures.

References:

4. Thomas, A.H., (2015), Measurement And Control Basics, 5th Edition, ISA Control Series.

CPD22203 MASS TRANSFER

This course introduces different types of unit operations involved in the chemical and other physical processing industries such as distillation, absorption, liquid-liquid extraction and solid-liquid extraction (leaching). It also deals with design of separation operations using mass transfer principles.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the principles of mass transfer in different types of unit operation in chemical industries.
2. Solve the principles of mass transfer problems in different types of unit operation in chemical industries.
3. Perform laboratory experiments safely based on procedures.

3. Coulson & Richardson (1983). Chemical Engineering, Vol.2, Pergamon Press, Oxford."

CPD22303 INDUSTRIAL SAFETY & HEALTH

To impart the knowledge and create awareness of occupational safety and health. Student will expose to the techniques, legal, society and cultural issues in making the workplace as safe as possible.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Illustrate the ability to recognize the types of hazards, the appropriate control measures and risks associated with safety and health at workplace.
2. Develop the ability to collaborate with team members in carrying out activities related to occupational safety and health, with referred to relevant safety and health laws.
3. Demonstrate business practices as well as technopreneurial competencies to all work activities related to occupational safety and health.

CPD22604 REACTION ENGINEERING

This course will impart knowledge in basic principles and fundamental in chemical reaction kinetics, types of reactor and its design characteristic and catalyst and catalytic reaction. Students will be exposed to a number of chemical reaction calculations involving different types of reactors.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve problems related to chemical reactions.
2. Analyze chemical kinetics in designing reactors.
3. Perform laboratory experiments safely based on procedures.

References:

1. Fogler H.S., (2020), Elements of Chemical Reaction Engineering, 5th Edition, Prentice Hall International Series.

4. Smith, J.M., (1986), Chemical Engineering Kinetics, 3rd Edition, Singapore, McGraw-Hill International"

CPD39806 FINAL YEAR PROJECT

This course introduces students with ability and skills in conducting a technical project based on their specialization area. It provides students with technical writing and presentation skills.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Plan the project activities to fulfil the proposed research problem.
2. Manage and execute the project plan to accomplish project objectives.
3. Analyse project results using appropriate technique or tools.
4. Produce a project report in accordance with the specified standard format.
5. Present and defend the project outcomes effectively.

ELECTIVES

DIPLOMA

Diploma in Chemical Engineering Technology

Sustainable Process Engineering

Elective 1: CPD22403 Plant Utility & Safety

Elective 2: CPD22503 Petrochemical & Petroleum Refining Technology

Elective 3: CPD22703 Plant Maintenance & Inspection

Elective 4: CPD22803 Oil & Fat Process Technology

CPD22403 PLANT UTILITY AND SAFETY

This course introduces students to basic chemical and non-chemical plant utility system such as prime movers, electrical system, water system, cooling system, boiler feed water treatment, boiler operation, electrical steam generation, compressor, and their safety aspects. Knowledge on plant utility and safety will be enhanced further during industrial visit.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Describe the function of various equipment utility and basic troubleshooting of plant.
2. Apply fundamental operation of plant equipment and basic safety practice for various plant utilities.
3. Display understanding of the plant utilities and safety fundamental based on industrial visit. (P3,

CPD22503 PETROCHEMICAL & PETROLEUM REFINING TECHNOLOGY

This course focus on the processing involved in petroleum refining such as pre-treatment, separation, conversion and treatment. It also covers the subtopic of petroleum exploration, composition and classification of crude oil, crude assay and blending of petroleum product. This course also covers the processing of natural gas and petrochemical synthesis.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Solve the problems involve in petroleum refining, natural gas and petrochemical synthesis.
2. Assess the processes involve in petroleum refining, natural gas and petrochemical.
3. Perform analysis of petroleum product and natural gas by following standard application.

CPD22703 PLANT MAINTENANCE & INSPECTION

This course is to provide fundamental knowledge in plant maintenance and inspection. It also introduces students to the importance of maintenance strategy and principles.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain basic management and maintenance in a plant process.
2. Relate between maintenance, commissioning, shutdown and start up procedure.
3. Propose related maintenance strategy and inspection of plant equipment.

CPD22803 OIL & FAT PROCESS TECHNOLOGY

This course introduces students to edible oil processing from raw materials to final product. It includes origin of edible oils, feedstock characteristic, fatty acid isolation and glycerine recovery and purification, fatty acids clusters, reactions and industrial application of oil and fat, the analysis of fatty acid and esters.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Relate the fundamental knowledge of Oil and Fat Technology with engineering parts.
2. Develop potential products or modification process as entrepreneurship projects.
3. Perform experimental activities associate with oil and fats technology.

DIPLOMA

Diploma in Chemical Engineering Technology

Biotechnology & Bioengineering

Elective 1: CBD22003 Introduction to Bioprocess Technology

Elective 2: CBD22103 Principle of Microbiology

Elective 3: CBD22203 Analytical Methods in Bioprocessing

Elective 4: CBD22303 Techniques in Bioproduct Recovery

CBD22003 INTRODUCTION TO BIOPROCESS TECHNOLOGY

This course encompasses on the scope and applications of bioprocess technology in making use of microbial, animal and plants cells and components of cells such as enzymes to manufacture new products. The scope of this subject includes fermentation technology, cell growth kinetics, bioreactors, inocula development, sterilization processes, agitation and aeration.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain the principles and scopes of bioprocess engineering technology including its application.
2. Demonstrate skills in fermentation operations.
3. Display ability to work and communicate effectively in team either as a leader or ordinary member.

CBD 22103 PRINCIPLES OF MICROBIOLOGY

This is an introductory course to basic microbiology including the diversity, characterization, microbial growth & cultivation as well as industrial application of microorganism such as bacteria, viruses and fungi.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Distinguish microorganism through its principles and characterization.
2. Perform laboratory works related to microbiological techniques.
3. Discuss the implementation of microbial technology in bioprocess industry through communication and presentation.

CBD 22203 ANALYTICAL METHODS IN BIOPROCESSING

This is a study of the fundamental biological material principle such as amino acids & peptides, protein, enzymes, carbohydrates, lipids, natural products and discusses the current innovative technology in the processing of biological products

Learning Outcomes:

Upon completion of this course students should be able to:

1. Explain general knowledge, characteristic and properties of biological material.
2. Show ability to identify problems, and solve using source of biological material principles.
3. Acquire knowledge and skills for lifelong learning.

CBD22303 TECHNIQUES IN BIOPRODUCT RECOVERY

This subject aims to expose the student about product recovery methods such as filtration, centrifugation, cell disruption, solvent extraction, chromatography, membrane processes, evaporation and drying. Besides, student will be able to understand the downstream processing with various types unit operation equipment.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Apply the appropriate techniques in bioproduct recovery stages.
2. Perform the operation in downstream processing.
3. Discuss the knowledge and techniques in bioproduct recovery to meet the desired needs of society.

Elective 1: CRD22303 Rubber Processing

Elective 2: CRD22103 Plastics Processing

Elective 3: CRD22203 Latex Science & Technology

Elective 4: CRD22303 Composite Technology

CRD22303 Rubber Processing

This module is aimed to convey an introductory knowledge of rubber technology. Various processing methods such as mixing, moulding, extrusion and calendering are also discussed. Troubleshooting of common moulding, extrusion and calendering problems are also highlighted. The relationship between different rubber properties, rubber chemicals, manufacturing techniques and applications is emphasized.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Analyze the types, properties, rubber manufacturing techniques, testing and applications of rubber.
2. Perform the correct rubber processing and analysis techniques according to different requirements.
3. Demonstrate entrepreneurial elements in selected lab report.

CRD22103 Plastics Processing

This course includes introduction to plastics, injection moulding, extrusion, blow moulding, thermoforming, processing of reinforced plastics, other processes, auxiliary equipment and secondary operations.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Differentiate various types of plastic materials, additives, plastic processing techniques and defects in the finished products.
2. Perform correct plastic processing techniques according to different processing techniques and requirements.
3. Demonstrate ability to work in a team either as a leader or ordinary member in completing practical session.

CRD22203 Latex Science & Technology

This is an elementary course aimed at providing students with latex science and technology knowledge; enhancing skills in preparation, testing and evaluation of latex concentrate as well as the basic principles in latex manufacturing and product testing.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Integrate fundamental knowledge of latex science and technology through various applications of latex.
2. Perform laboratory works of latex concentrate correctly.
3. Demonstrate role either as a leader or ordinary member in a team effectively during laboratory work sessions.

CRD22303 Composite Technology

This module is aimed to convey a basic knowledge of polymer composites. The advantages of polymer composites and their applications are highlighted. The common polymeric materials that can be used as composite matrix and reinforcement are discussed in detail. Common polymer composite manufacturing processes are also discussed in detail.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Analyze the components of polymer composites, functions, commercial applications and composite manufacturing.
2. Perform practical-based project on composite materials.
3. Present an enthusiastic and well practiced presentation on practical-based project.

ELECTIVES

DIPLOMA

Diploma in Chemical Engineering Technology

Environment Engineering Technology and Sustainability

Elective 1: CED22003 Wastewater Treatment Technology

Elective 2: CED22103 Air Pollution Control Technology

Elective 3: CED22203 Introduction to Environmental Engineering Technology

Elective 4: CED22303 Solid and Hazardous Waste Management

CED22003 Wastewater Treatment Technology

Students will be introduced with basic principles of wastewater treatment plant and residuals processing unit operations (physical, biological and chemical treatment options), the concepts of effluent residuals disposal and reuse particularly when treating and removing water pollutants. Other than that, students will be exposed with sustainable treatment methods for the removal of heavy metal from wastewater at reasonable cost and a fieldwork will be implemented at a various industry to gain more knowledge and hands-on experience.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Analyze the physical, chemical and biological parameters of raw wastewater with explanation on how these parameter can help in determining the appropriate treatment units for a municipal or industrial wastewater treatment plant.
2. Perform laboratory work based on the manual or guidelines given or guided by the instructor.
3. Able to follow the instruction/safety procedure and use the appropriate tools during the laboratory experiments.

3. Hammer MJ. (2004). Water and Wastewater Technology. 5th edition. Prentice Hall.
4. Masters GM.(1998).Introduction to Environmental Engineering and Science. Prentice-Hall.

CED22103 Air Pollution Control Technology

An operating and measurement equipment typical used in controlling air pollutants are introduced. History of air pollution and air pollution legislation are discussed. Air quality management techniques are introduced. Physical principles used to detect and measure pollutants in the ambient air and from the sources are introduced. Laboratory experiments involving air controlling device unit to remove CO₂, SO₂, NO_x, CO, and particulate matter are introduced. An awareness of modern environmental protection legislation and ethical considerations are discussed.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Discuss air pollution management practices in term of its regulations, strategies and technologies. (C4,PLO1)
2. Apply appropriate methods for measurement, control, and prevention of air pollution with respect to industrial economic viability and availability. (P3,PLO4)
3. Demonstrate good communication and showing respect to one another. (A3,PLO10)

3. Purwer, D. (1997). Fundamental Aspects of Pollution Control and Environment. Elsevier, London.

CED22203 Introduction to Environmental Engineering Technology

The course will provide students with basic principles of environmental engineering technology with relation to natural environment system, principles of pollution and treatment/control methods of various environmental pollutants. Several important law and regulations will enhance student's knowledge on institutional environment.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Demonstrate knowledge in applied engineering processes, mathematics, and sciences to manage environmental challenges and able to recognise, explain and discuss the concepts of resilience and sustainable development.
2. Perform fieldwork and laboratory analysis by applying the knowledge gain during classes.
3. Design solution through problem-solving skills by means of information gathering, social interaction within team and communication of results to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

CED22303 Solid and Hazardous Waste Management

This course will introduce the students to waste management, emphasizing on waste accumulation, generation rates, characteristics, handling, storage and disposal options, pollution prevention, environmental auditing, remediation, cleanup and modern combustion processes such as engineered incineration systems. The important impact of various treatment methods available in both type of waste management with respect to human and environmental health will be taken into account. Furthermore, Characterization of solid wastes and introduction to pertinent federal and state regulations will be discussed. On the other hand, Environmental protection legislation and ethical considerations will also be discussed.

Learning Outcomes:

Upon completion of this course students should be able to:

1. Infer the basic principles of waste management, processing methods, 6Rs, treatment, disposal, remedial action and current issues related to solid and hazardous waste management.
2. Organize a case study on solid waste management activity involving with the suitable stakeholder.
3. Participate actively in class/project/discussion activity.
